Group Project 2 - Website in HTML and CSS

Description:

My teammates and I created an online shopping website page. Immerse yourself in a seamless browsing experience with detailed product insights, powerful search tools, and carefully curated categories for easy exploration. Easily browse your selections with our intuitive shopping cart to ensure a smooth checkout process.

Approach:

To implement a basic page layout with a login form using the provided code, we first focused on creating the HTML document using semantic elements. We create a header section that contains navigation links to different parts of the site, such as the storefront, language settings, shopping cart, and user settings. Then we design the main content area to provide a centered login form where users can enter their usernames and passwords. We make sure the form includes username and password fields, as well as a submit button for authentication and a link for the user to register if they don't already have an account.

After establishing the HTML structure, we proceed to apply styles via external CSS stylesheets to achieve the desired layout. The title will feature a dark background and white text, complemented by hover effects on navigation links to increase user engagement. Meanwhile, the login form receives styling enhancements, including a gray background, rounded corners, and subtle drop shadow effects, creating a modern and visually pleasing look. The styling of all form elements and buttons remain consistent throughout the page for a coherent design.

As development progresses, we prioritize accessibility by using correct HTML markup and ensuring that every element is easily navigable by keyboard and compatible with screen readers. In addition, we also conduct comprehensive testing to ensure cross-browser compatibility and seamless functionality across a variety of devices and screen sizes. This ensures that our website remains inclusive and accessible to all users, regardless of their preferred browsing method or device.

Issues and Resolutions:

No Specific problem
