

Assignment 1 – Installation of Linux, Node & Express

Description:

The objective of this assignment is to install the virtual machine and use it to write a simple web page.

Approach / What I Did:

I used HTML code to complete this assignment.

`<!DOCTYPE html>` is a document type declaration that specifies the document type and version of HTML being used.

`<html>` is the root element of an HTML document. All other elements should be descendants of this element.

`<head>` contains about document, for example, title, metadata, links to external resources, and scripts.

`<body>` contains the content of the HTML document that is displayed to the user.

`<p>This is Po-Han Chen {{currentDate}}</p>` is a paragraph element (`<p>`) that contains the text.

``hello there``: This is plain text that appears directly in the body of the HTML document.

```` is an image element (`<img>`) that displays an image. The ``src`` attribute specifies the URL or path to the image file ("923446482\_id.jpg"), and the ``width`` attribute sets the width of the image to 300 pixels.

``</body>``: is the closing tag marks the end of the body section of this HTML document.

`</html>` is the closing tag mark representing the end of the HTML document.

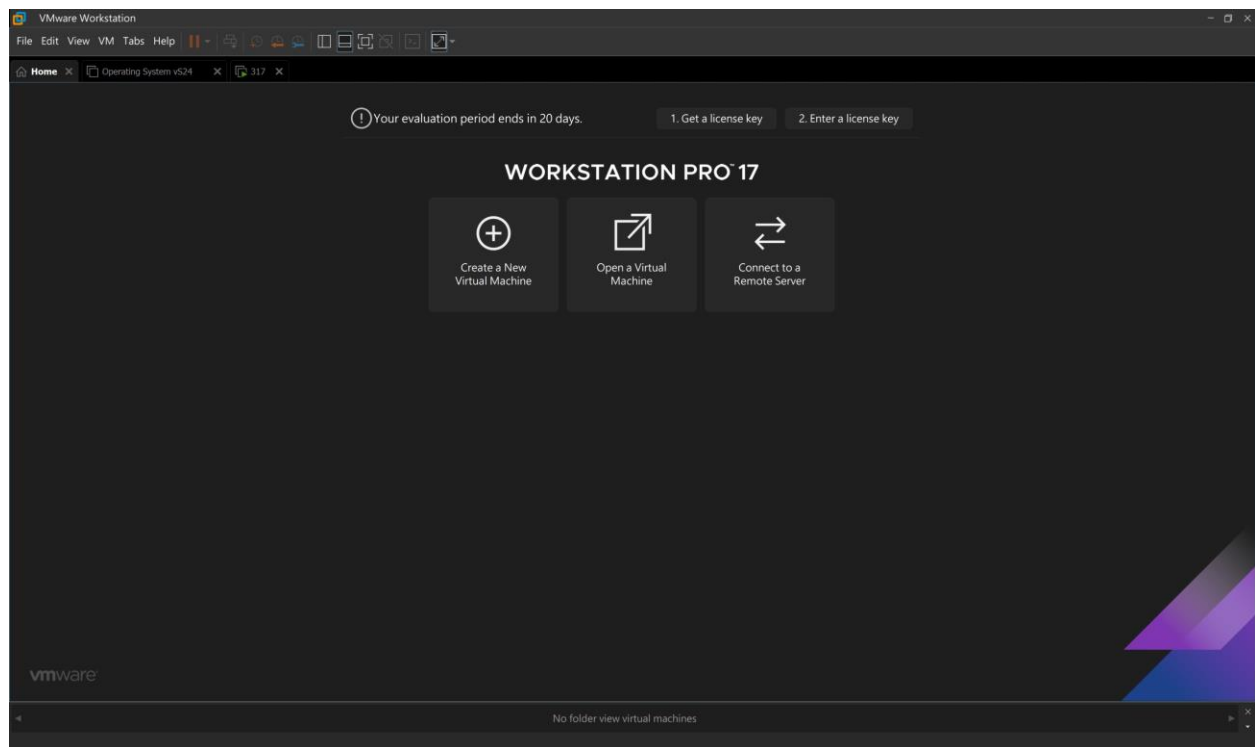

### Issues and Resolutions:

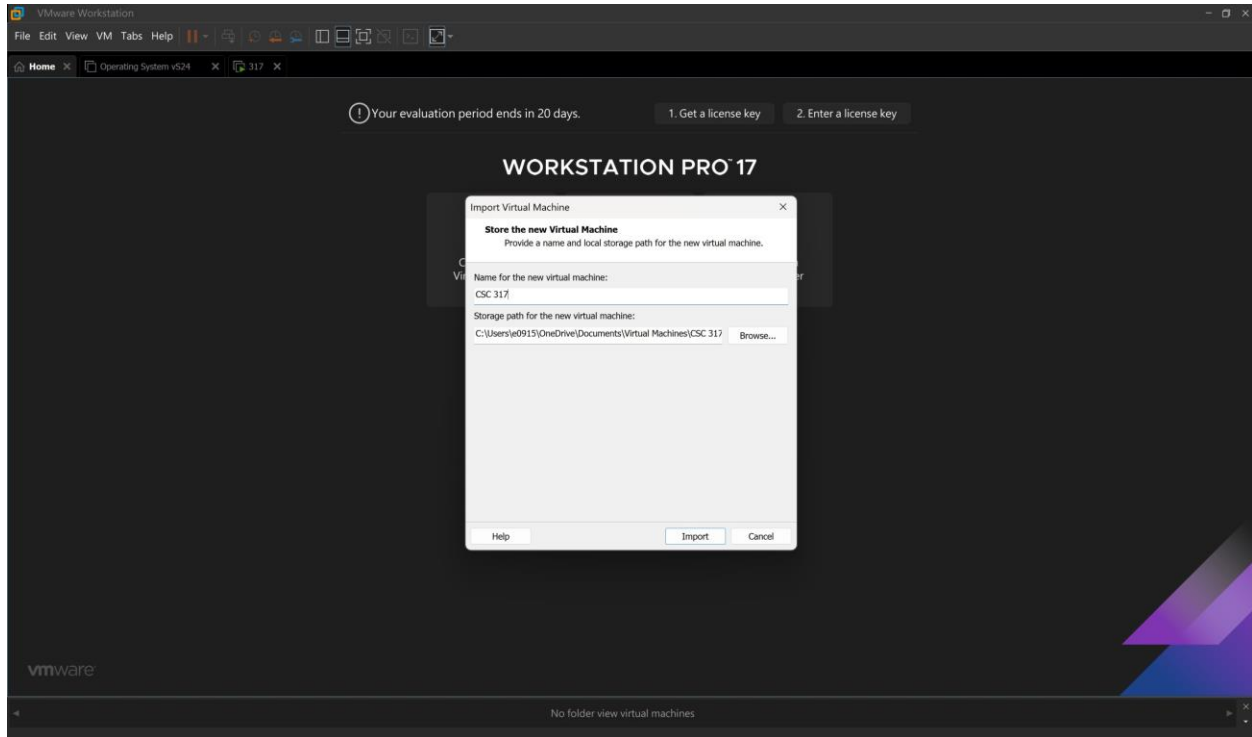

When I use command prompt, I typed "cd documents" and I can't access the document. Finally, I found that I should type "cd Documents"

### Analysis:

HTML document is following the standard structure with a doctype declaration, <html>, <head>, and <body> elements. For the text content, <p> and <p> are contain text I want to write. For the image, <img> I need to put the image name inside. And I can set the size of it.

### Screen shots:

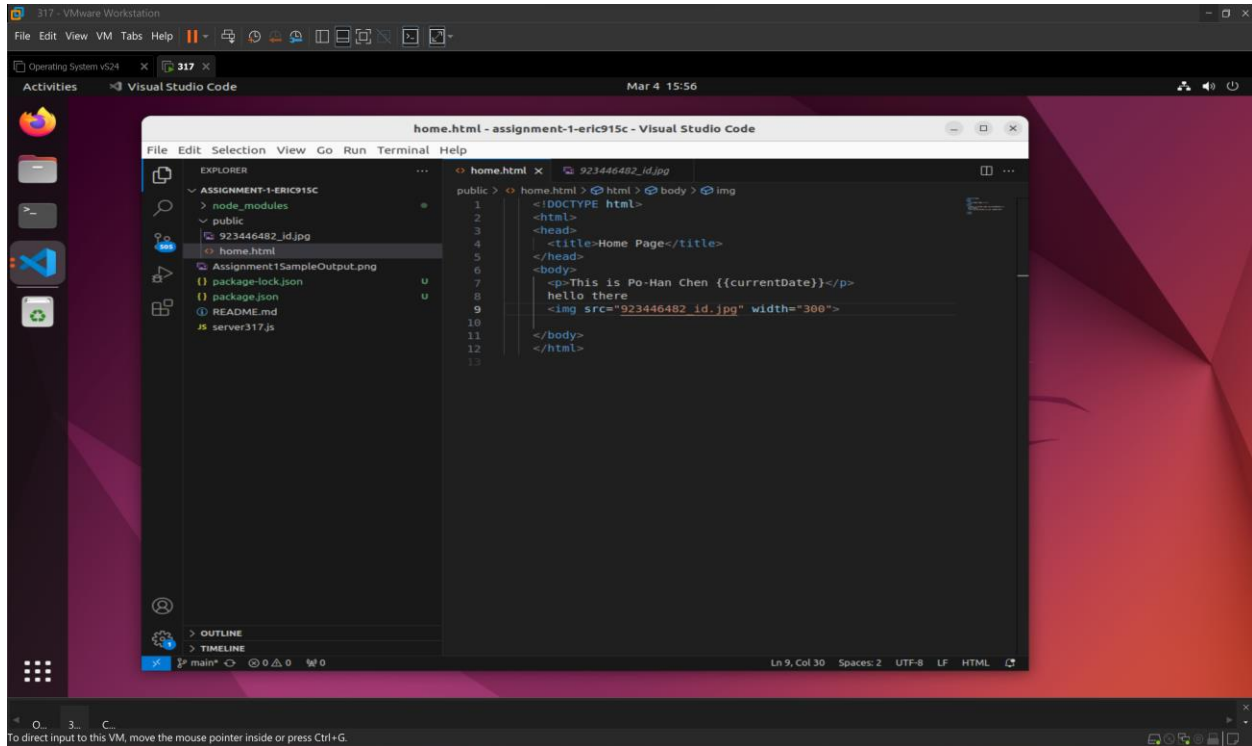

```
student@student:~$ curl sfsu.edu
<!DOCTYPE HTML PUBLIC "-//IETF//DTD HTML 2.0//EN">
<html><head>
<title>301 Moved Permanently</title>
</head><body>
<h1>Moved Permanently</h1>
<p>The document has moved here.</p>
</body></html>
student@student:~$
```

```
student@student:~$ git --version
git version 2.34.1
student@student:~$ git config --global credential.helper store
student@student:~$ git config --global user.email "e0915c@outlook.com"
student@student:~$ node -v
v12.22.9
student@student:~$
```

```
