

Watcher Hi-Fidelity Prototype & Heuristic Evaluation Report

1. Iterations Based on Mid-Fidelity Feedback

Key Issues from Mid-Fidelity Prototype

- 1. Lack of clear feedback or task completion confirmation**
 - Users were unsure whether the "Save" action succeeded due to no feedback.
- 2. Lack of achievements and prompts; insufficient motivational feedback**
 - After completing entries, users did not receive reinforcement or guidance.
- 3. Graph visuals were overly simplistic**
 - No explanatory labels or descriptions for data values.

Changes Made and Their Explanations

Issue Identified	Solution Implemented	Outcome
No feedback after saving	Added confirmation screens for HR4/Sleep Tracker	Users now receive clear feedback and feel a sense of completion
Lack of motivational prompts	Added Weekly Report, Trophy, and Streak features	Positive reinforcement increases engagement
Graph lacked readability	Added labels, emojis, and explanatory visuals	Makes data interpretation more intuitive and user-friendly

2. Heuristic Evaluation

Evaluation Based on Nielsen's 10 Usability Heuristics

1. Visibility of System Status

Observation: Original version lacked feedback after saving or submitting actions.

Improvement: HR4 and Sleep Tracker now show success screens with checkmarks, text, and visuals.

2. Match Between System and the Real World

Observation: Common terminology like "Heart Rate," "Sleep," and "Goals" aligns with user expectations.

Highlight: Mood tracker uses emojis, making input intuitive and expressive.

3. User Control and Freedom

Observation: Most screens include a "Back to Home" or return button.

Suggestion: The sign-up process lacks a clear reset/clear-all function.

Note: This issue has been identified but not addressed yet. It is scheduled for implementation in future development iterations.

4. Consistency and Standards

Observation: Color scheme (primary purple), icons, and buttons maintain consistent design language.

5. Error Prevention

Observation: The sign-up page includes re-enter password to prevent typos.

Suggestion: Consider adding real-time format checks in future versions.

Note: This remains a known limitation and will be addressed in a future version.

6. Recognition Rather Than Recall

Observation: Home icons include text labels; HR1-HR3 use visual scores to reduce cognitive load.

7. Flexibility and Efficiency of Use

Observation: Navigation is simple for both new and experienced users.

Suggestion: Add shortcuts or advanced settings in future versions.

8. Aesthetic and Minimalist Design

Observation: Good use of whitespace and minimal distractions, with clean UI elements.

9. Help Users Recognize, Diagnose, and Recover from Errors

Observation: Lacks immediate error prompts for incorrect inputs like email or password.

Note: This issue is acknowledged and planned to be resolved in upcoming development updates.

10. Help and Documentation

Observation: Interface is intuitive, but lacks guidance or help links for new users.

Note: Help documentation and onboarding guidance will be considered in future updates.

3. Addressing Identified Issues

Issue Identified	How It Was Addressed	Related Heuristic
No feedback on save actions	Added confirmation screens in HR4/Sleep pages	1 - Visibility of System Status
HR data was too abstract	Added label explanations, emojis, and indicators in HR1~HR3	6 - Recognition Rather Than Recall
Graph lacked context or meaning	Added labels + up/down trend descriptors	2, 8 - Match with Real World, Aesthetic Design
No motivation or reinforcement cues	Added Health Tips, Streaks, Trophy, and Weekly Reports	7 - Flexibility & Motivation Support
