

README – Hi-Fidelity Prototype

App Introduction & Core Features

WATCHER is a health assistant prototype designed to help users make sense of wearable device data. While many people track heart rate, HRV, and sleep with devices like Apple Watch or Fitbit, they often struggle to understand what the numbers mean.

WATCHER closes this gap by providing a user-friendly interface along with AI-driven recommendations, which promote healthier daily habits and boost user engagement.

Core Features:

- Health Trends Overview: Track weekly changes in Heart Rate, HRV, and Stress.
- Feedback: Get personalized suggestions based on your health data and mood.
- Sleep Tracker: Log sleep quality and receive tailored advice.
- Active Energy: Monitor step count and calories burned.
- Weekly Report & Achievements: Summarized insights and consistency badges.

How to Use the Prototype

1. Sign Up & Onboarding

Start on the Welcome Page, then proceed to Sign up.
Fill out the basic user information.
Once completed, you're directed to the Home screen.

2. Home Screen – Dashboard

View four main health tracking cards:

- Heart Rate
- Health Trends
- Sleep Tracker
- Active Energy

Each card is tappable and leads to a detailed input or tracking interface.

3. Heart Rate Tracker

Log your current mood using emoji options.
Describe your activity (e.g., walking, resting).
Click 'Save' to receive AI-generated feedback tailored to your input.

4. Health Trends

View graphs of weekly changes for:

Heart Rate

HRV (Heart Rate Variability)

Stress

Tap individual tabs to switch between trend charts.

Read personalized weekly insights at the bottom of each screen.

5. Sleep Tracker

Input your sleep start and end times.

Rate your sleep quality using emojis or sliders.

Click 'Save' to generate a visual summary and a tip for better sleep.

6. Active Energy

Track your step count and calories burned.

Visualize daily energy output through a bar chart.

7. Overview Page

Accessed via the bottom navigation bar ( icon).

See a comprehensive weekly health summary.

Includes progress across multiple metrics and AI-generated conclusions.

Tap 'Share' to preview the weekly report sharing interface.

8. Settings Page

Accessed via the bottom navigation bar ( icon).

Modify goals, manage notifications, toggle light/dark mode, and view account or privacy settings.

Interact with Buttons & Components

Most screens include interactive elements such as 'SAVE', 'SHARE', or tab toggles.

These simulate real user flows and transitions, mimicking the final app experience.

Tools & Limitations

Design Tools Used:

Figma - Interface design and prototyping

remove.bg - Background removal for illustrations

ChatGPT - Support for design text

iMovie - Demo video editing
