

Points of View (POV) Summary

1. **Ning**
 - a. **Observation:** Ning does not trust the data displayed on her device.
 - b. **Insight:** This might indicate that the data is not easy to understand.
 - c. **Impact:** Making data more accessible and comprehensible could significantly improve trust and usability.
2. **Michael**
 - a. **Observation:** Michael checks his device 2-3 times a day.
 - b. **Insight:** This suggests that he is a heavy user who may benefit from more personalized insights.
 - c. **Impact:** Creating a personal coaching system for heavy users could enhance their experience and engagement.
3. **Herman**
 - a. **Observation:** Herman tracks a lot of data but struggles to interpret it.
 - b. **Insight:** This implies that many athletes may feel overwhelmed and require clearer insights.
 - c. **Impact:** Offering a tool that simplifies and personalizes data interpretation could greatly enhance usability.

How Might We (HMW) Questions

1. **Ning**
 - a. HMW make users trust the data?
 - b. HMW make the data easy to understand?
 - c. HMW make the user try different data when they use those devices?
 - d. HMW make those data turn into suggestions?
 - e. HMW make more detail explanation for the data?
2. **Michael**
 - a. HMW simplify health data for easier understanding and action?
 - b. HMW provide personalized insights, like reducing caffeine, based on heart rate trends?
 - c. HMW offer clearer explanations for metrics like blood oxygen and HRV?
 - d. HMW make notifications more personalized and useful?
 - e. HMW provide actionable health tips based on sleep and heart rate data?
3. **Herman**
 - a. HMW simplify Garmin's data for non-tech-savvy athletes?

- b. HMW provide personalized insights to improve VO2 max and recovery?
- c. HMW help athletes understand their performance data without feeling overwhelmed?
- d. HMW give actionable recovery tips based on training trends?
- e. HMW help athletes link fatigue levels to performance trends for better training?

HMW & Solutions Summary

HMW 1: How might we turn data into actionable suggestions?

- Use AI to analyze and generate recommendations.
- Convert data into easy-to-understand charts and summaries.
- Implement an AI assistant that translates complex data into clear advice. ★ (Top 3 Solution)
- Deliver context-aware suggestions at the right moment.
- Allow smart assistants (e.g., Siri, Alexa) to interpret data and provide verbal recommendations.
- Implement habit-forming techniques like reminders and rewards to encourage positive action.
- Show anonymized comparisons with similar users to motivate better performance.
- Let users experiment with "what-if" situations to see potential outcomes of different choices.
- Adapt fitness, sleep, or health targets based on real-time data analysis.
- Connect wearables to other smart devices (e.g., smart lights, thermostats) to automate environmental changes based on data.

HMW 2: How might we simplify health data for easier understanding and action?

- Design a simplified dashboard highlighting only key health metrics.
- Use color-coded visuals to show trends in heart rate, sleep, and activity at a glance.
- Provide daily or weekly summaries that simplify complex data into actionable insights. ★ (Top 3 Solution)
- Develop an AI assistant that explains health metrics in plain language.
- Introduce a "What This Means" feature to simplify confusing terms like HRV or recovery time.

- Introduce trend-based notifications that alert users to meaningful changes in their health data.
- Allow users to set personal health goals and receive insights tailored to their progress.
- Design a comparison tool that shows how current health data compares to past performance.
- Add interactive explanations that help users understand how different metrics affect their overall health.
- Personalized recommendations based on a user's lifestyle, making the data more relevant and useful.

HMW 3: How might we provide personalized insights, such as reducing caffeine, based on heart rate trends?

- Create an AI-powered tool that detects unusual heart rate spikes and suggests lifestyle adjustments. ★ (Top 3 Solution)
- Develop a habit-tracking feature where users log caffeine intake and receive insights on its impact.
- Send personalized notifications when heart rate trends indicate potential overconsumption of stimulants like caffeine.
- Design a smart dashboard that correlates heart rate data with daily habits and provides tailored recommendations.
- Introduce a morning health check that evaluates resting heart rate and suggests optimizing caffeine intake accordingly.
- Build a feature that compares heart rate variability (HRV) trends with lifestyle factors and suggests improvements.
- Integrate mindfulness or breathing exercises when elevated heart rates are detected due to stress or caffeine.
- Offer a personalized weekly report summarizing heart rate trends and suggesting modifications in diet, sleep, and exercise.
- Create a dynamic alert system that warns users when caffeine or stress is negatively affecting their recovery.
- Provide a learning module that educates users on how caffeine and other lifestyle factors influence heart rate and overall health.
