

AI Disclosure

We use ChatGPT for:

- generate questions we might never have thought about to make it better
- How to make UI ensure responses are clear, helpful, and human-like
- Polishing written content across UI elements, feedback summaries, and user interaction descriptions

Contribution Statement

Hsueh-Ta Lu: Responsible for the interface layout design and AI interaction process of the sleep and sedentary reminder modules. Led the creation of tester-specific user scenarios and response models.

Tung-Ying Lee: Designed user interactions for heart rate monitoring and breathing exercises. Helps with feedback analysis and incorporates suggestions into revised prototypes.

Po-Han Chen: Assisted in developing the AI-generated response logic and proposed adding intuitive buttons such as “Start Breathing Exercise”. Also contributed to organizing user flows and health module integration.

Hsin-Ying Tsai: Support user testing and feedback integration. Wireframe sketch of leader’s daily activity tracking and step response. Helps simplify the user interface for better understanding by consumers.

Teaster A (Mr. wang, 25 years old)

Tester ask
AI question →

My heart rate is
higher than usual
what should I do?

Your current heart rate is
95 BPM, which is 10% higher
than the average of the past
7 days, it is recommended to
take 5 minutes of deep
breathing Exercise

AI analyzes
and responds

START Breathing Exercise

Tester C (Mr. Chen, 45 years old)

I've been sleeping less recently, will it have any impact?

Your average sleep in the past week was 6 hours, which is 2 hours less than recommended value. The recommended time to bed is before 12 PM, and wake up at 08 AM.

Feedback :

Like the "Start Breathing exercise" button, feels very intuitive.

Hope to add further analysis on "why does the heart rate become high"?

Tester B (Ms. Lee, 30 years old)

User asking
impact

My step count
today is lower
than average. Is
there any impact?

Your step count today
is 3500, which is
40% less than the
average of the past
seven days. It is
recommended to stand
up and move around
once an hour

App Information

Problem & Solution

App Name: Watcher

Sanika Doolani

Problem: Users struggle to interpret wearable health data, leading to missed insights and limited engagement in proactive health management.

Sanika Doolani

Solution: An intuitive, AI-driven interface with simplified visuals and actionable recommendations to enhance user understanding.

Sanika Doolani

User Tasks: Write down all the tasks the user can do using your app

Monitor real-time health data
